HEDIS[®] Quick Reference Guide

Updated to reflect NCQA HEDIS® 2020 Technical Specifications

Louisiana Healthcare Connections strives to provide quality healthcare to our membership as measured through HEDIS® quality metrics. We created the HEDIS® Quick Reference Guide to help you increase your practice's HEDIS® rates and to use to address care opportunities for your patients. Please always follow the State and/or CMS billing guidance and ensure the HEDIS® codes are covered prior to submission.

WHAT IS HEDIS?

HEDIS® (Healthcare Effectiveness Data and Information Set) is a set of standardized performance measures developed by the National Committee for Quality Assurance (NCQA) to objectively measure, report, and compare quality across health plans. NCQA develops HEDIS® measures through a committee represented by purchasers, consumers, health plans, health care providers, and policy makers.

WHAT ARE THE SCORES USED FOR?

As state and federal governments move toward a quality-driven healthcare industry, HEDIS® rates are becoming more important for both health plans and individual providers. State purchasers of healthcare use aggregated HEDIS® rates to evaluate health insurance companies' efforts to improve preventive health outreach for members.

Physician-specific scores are also used to measure your practice's preventive care efforts. Your practice's HEDIS® score determines your rates for physician incentive programs that pay you an increased premium — for example Pay For Performance or Quality Bonus Funds.

HOW ARE RATES CALCULATED?

HEDIS® rates can be calculated in two ways: administrative data or hybrid data. Administrative data consists of claim or encounter data submitted to the health plan. Hybrid data consists of both administrative data and a sample of medical record data. Hybrid data requires review of a random sample of member medical records to abstract data for services rendered but that were not reported to the health plan through claims/encounter data. Accurate and timely claim/encounter data reduces the need for medical record review. If services are not billed or not billed accurately, they are not included in the calculation.

HOW CAN I IMPROVE MY HEDIS SCORES?

- Submit claim/encounter data for each and every service rendered
- Make sure that chart documentation reflects all services billed
- Bill (or report by encounter submission) for all delivered services, regardless of contract status
- Ensure that all claim/encounter data is submitted in an accurate and timely manner
- Consider including CPT II codes to provide additional details and reduce medical record requests

PAY FOR PERFORMANCE (P4P)

P4P is an activity-based reimbursement, with a bonus payment based on achieving defined and measurable goals related to access, continuity of care, patient satisfaction and clinical outcomes.

(ABA) Adult BMI Assessment

This measure demonstrates the percentage of members ages 18 to 74 who had and outpatient visit and whose body mass index (BMI) was documented.

1) For patients 20 and over: code the BMI value on the date of service.

2) For patients younger than 20: code the BMI percentile on the date of service.

3) Ranges and thresholds do NOT meet criteria; a distinct BMI value or percentile is required.

(AMR) Asthma Medication Ratio

Measure evaluates the percentage of members 5-64 years of age who were identified as having persistent asthma and had a ratio of controller medications to total asthma medication of 0.50 or greater.

- For each member, count the units of asthma controller medications (Asthma Controller Medications List) dispensed during the measurement year.
- For each member, count the units of asthma reliever medications (Asthma Reliever Medications List) dispensed during the measurement year.
 - For each member, sum the units calculated in step 1 and step 2 to determine units of total asthma medications
 - For each member, calculate ratio using the below:
 - Units of Controller Medications / Units of Total Asthma Medications
